

Mail Dynamics Integrator Features

Highlights

- ❖ Independent application (No need for the **source code** of existing application)
- ❖ Independent of technology (Java or .Net or VB with any Database)
- ❖ No compromise on security (**SOA Architecture**)
- ❖ Affordable cost (As low as USD 400 for basic requirements) for **unlimited** users
- ❖ Can be tailored to suit the business and user requirements within a short period (3-7 days)
- ❖ Avoids redundant data entry and also reduces the requirement of double entry, thus results in efficient resource utilization and **immediate ROI**
- ❖ Eliminates human error while transferring data from email to application
- ❖ Can run workflow easily
- ❖ User friendly
- ❖ Applicable and can be useful for all domains (E.g.- HRMS – Leave approval, Logistics – PO Approval, Finance – Credit/Debit note upload/approval, Shipping – Rate Request, Quotation import, EDI import, Approvals, Logistics – Manifest import, Rate Request/Approval, CRM/MRM – Approvals and escalations, preserving attachments with subject reference etc.,)

Objective

This simple and smart solution targets to optimize the workflow for the software users irrespective of the domain and technology.

The centralized security and flexibility is the highlight of the system, which enables the users to interact from anywhere and upload data directly from any location. So the time delay as well as duplication of work is highly avoided thus helping the business to grow more effectively.

The uniqueness of the system is the user friendly features provided and the elimination of human errors, identified from continuous customer feedbacks. Each and every option is felt and digested before it was designed and converted into software.

Application Overview

The Dynamics Email Integrator consists of following components

- ✓ Outlook plug-in
- ✓ Business logic source (should be deployed in IIS or SOA supported app server)

This is where the desired output is processed and configured.

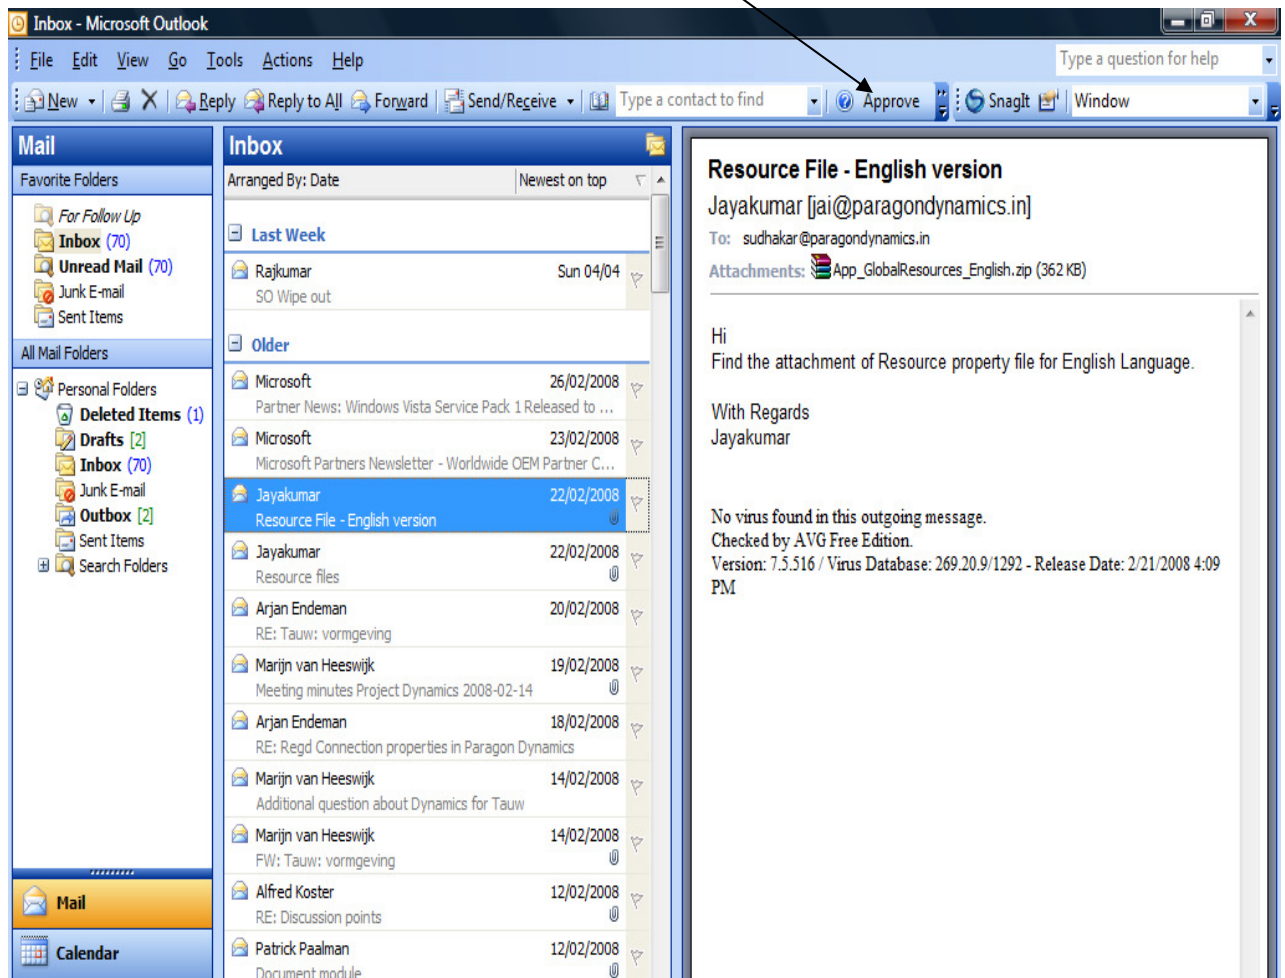

Similarly we can pull/export the data from any db and send mails with reports or alerts also without disturbing the core system.

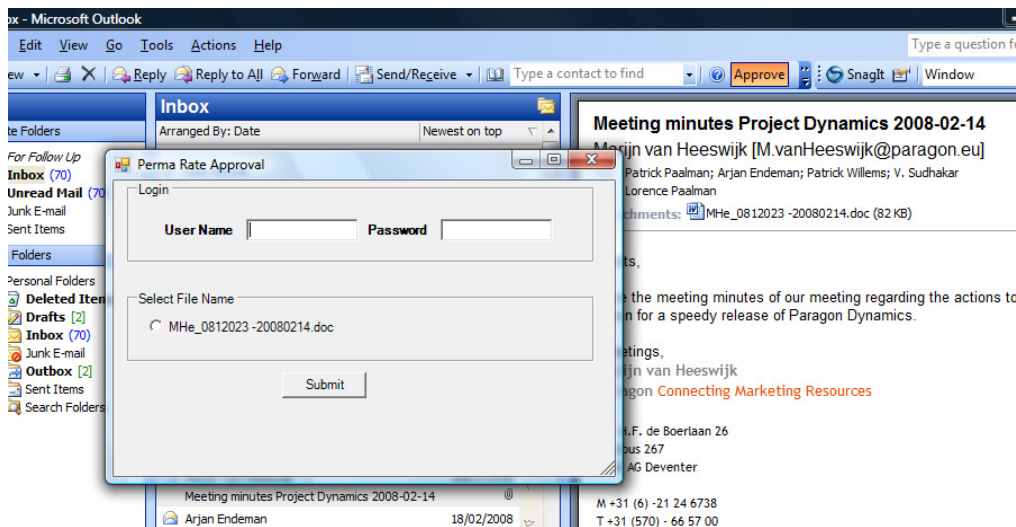

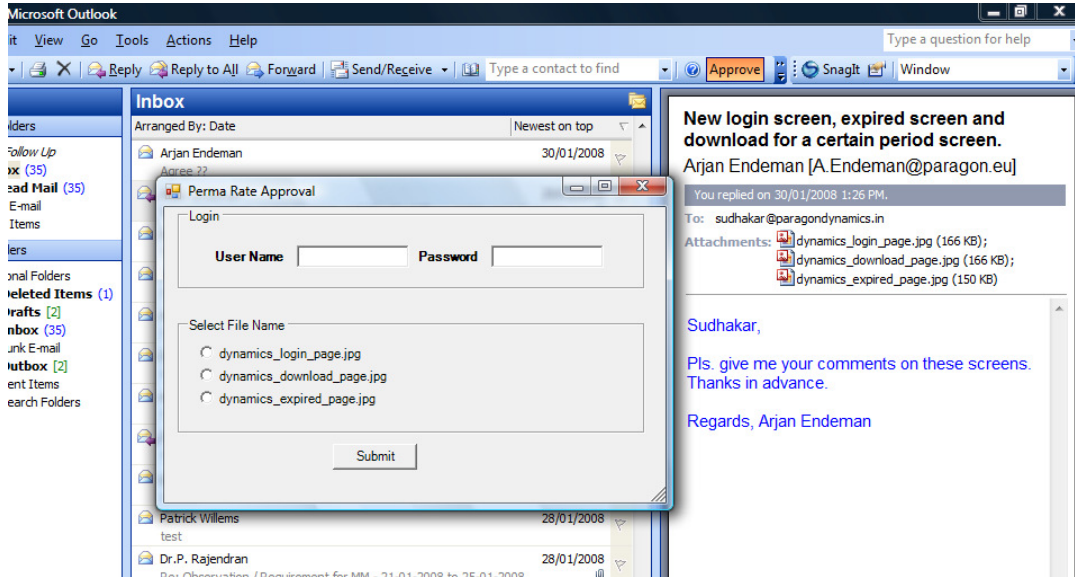

Over All system functionality

The plug-in will install a button in the outlook express mail box. This button will open the functional form to browse the attachments and read the username/password from user input.

User can select the attachment that has to be uploaded or imported to the system (ERP or Application). The data from the attachment will be processed and transferred to DB or file storage or to any desired output.

Similar plug-in we can have for Microsoft-excel which will facilitate data transfer from excel to application, and also vice versa (update/populate the excel content from the application).

REQUEST :

	20'	40'
OCEAN FREIGHT	100	200
FAF/CBR	25	50
ISPS		
ORIGIN THC	182.00	270.00
DESTINATION THC	2,600.00	3,900.00
DG SURCHARGE	23.00	232.00
OTHERS	2.00	2.00

Once user clicks the update button (2) the data from the excel will be transferred to the application database.

In the below screen , RR NO (Rate Request Number) will be generated in the system and the same will be updated in excel. So that user can send this excel directly to customer without logging in to the ERP.

RR NO: SINBKK11704

	20'	40'
RATES	300.00	600.00
VOLUME (PER WK)	5.00	8.00
